

Heightwatch 6

Height limiting made simple

The Heightwatch 6 range protects operators and assets against overhead hazards, including bridges, tunnels, signs and live power lines. Calculating the boom's angle alongside pre-set height restrictions, the system monitors the boom's position in real time to keep it within safe working limits. For added safety, hydraulic motion cuts are available to automatically restrict machine movement when limits are reached.

Benefits:

- Real-time height monitoring
- Alerts operator when approaching limits
- Protects against overhead hazards
- Simple to set up and use

Key features:

- Limits maximum angle of boom to restrict height
- Allows operator to set working limits
- Warning lights
- Audible alarm
- Test button
- Override function
- *(Optional)* Hydraulic motion cuts (on boom only)

Technical specification:

- Complies with EN55022: 1987 and BS6527: 1988 standards
- CE approved
- Weather protection – tested to IP66
- Operating temperature range: -20°C to 60°C
